

Improving your Technology experience.

Introducing RFID to all the printers across all the locations in Sri Lanka.

An initiative by Sri Lanka IT team.

In order to provide you with the best technology features to Pearson Lanka, we would like to announce you that as a new feature, we are introducing **RFID** to all the printers across all the locations in Sri Lanka.

How it works?

Step 1: You need to register your staff ID in the RFID system (IT staff will facilitate you through the initial registration process)

Step 2: When the need arises to get a print out, you would command to take a print as usual.

Step 3: You will get your print out only when you swipe the staff ID at the printer RFID card reader.

PS: Once the RFID system is activated, you will not be able to print directly as you used to, as the RFID would be made mandatory.

What are the advantages?

- **1.** Higher confidentiality, as only you will be able to obtain the documents you commanded to print as the system would require staff ID authorization.
- 2. Mitigate the wastage of paper and toner cost by not allowing print commands which were mistakenly instructed, as you would get an option to cancel the print from the printer.
- **3.** If you haven't taken the print outs which is in the print queue, printer will automatically clear the print commands after a certain period of time (ideally after 24 hours) which would again ultimately help us mitigate the wastage of paper and toner cost.
- **4.** This will also allow administrators to generate extended printing reports individually with the detailed printing information which would ultimately help the organization in making administrational decisions.
